» Department wise K.O.T./B.O.T.

Benefits
» Complete business management through detailed analysis
» Increase table turnover
» Increased profitability
» High performance smart restaurant
» Secured transactions
» Reduce labour cost
» Increase in Sales
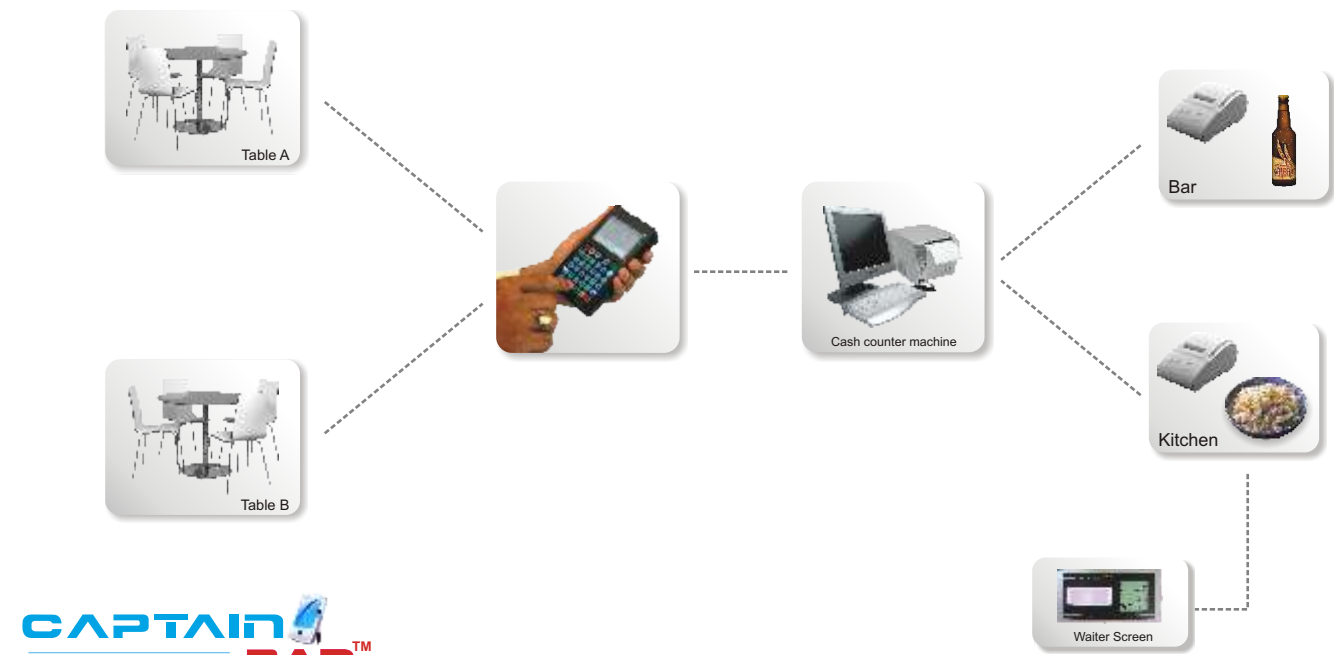

Advantages
» No lost or incorrect orders
» Maximum staff utilization
» Enhanced customer service
» Increased tractability of the ordered items
» Waiter can stay in their service area
» No manipulations in billing
» Minimum billing errors
» Fast operation

How it works

In conventional restaurant management, captains take order on a paper, gives it to the waiter for making its entry with the operator and then takes it to the kitchen, bar or pantry etc. In this situation not only the legwork of the waiter is increasing, but a lot of manual interaction and interpretation is required. Not only is everyone's precious time wasted, in turn customers also wait for the service from the waiter resulting in pressure and poor order management.

With CaptainPad™ PDA, the captain can take orders on a wireless touchpad handheld. The captain has to just add the items and order from his PDA device, instantly the KOT/BOT comes out at their perspective departments likewise it reflects in the cash counter machines (Server). Captain and waiter need not leave the service area and hence provide their customers with better service. Captain can take the order like less spicy, medium spicy, kadak, 1by2 and other remarks also.

Table A · Bar · Cash counter machine · Kitchen · Table B · Waiter Screen

CAPTAIN PAD™
Redefining Order Management

CaptianPad Point Of Sale (POS)

Easy Operation
Ease of use is of paramount importance in the hospitality industry! No one can afford to be spending minutes processing a transaction and that's one of the fundamental principles that CaptainPad™ POS was developed on.

Interactive Table Display
Struggling to take control of the floor? CaptainPad™ POS can help. POS has a graphical table display that gives a clear picture in the blink of an eye. POS allows the user to configure the appearance of the screen and the layout of tables. The interactive display shows which tables are occupied, available or soon to be available.

Flexibility in Operation
CaptainPad™ POS allows the user to switch between various operating modes such as table, bar and take away at the touch of a button, eliminating complex or time consuming processes.

Management Information System
CaptainPad™ POS uses open architecture hardware to ensure you're getting the best value for investment. You will be able to watch the executions & get all required reports anywhere in the world and without being opened by others. Data will be secured with your password

Material Management System (MMS)

MMS is about computerization & automation for handling material operations in Restaurants. Basically the main steps Inward, Outward, Return are provided in it. The workflow of this system is Adding Material (Inward), Issuing Material (Outward), Taking Material Returns and Generating Indent and PO Request.

How it works

The CaptainPad™ generates list of material purchased from the vendors and accordingly purchase order (PO) is made. It helps the vendor to send material as per the PO. Once the material is received, the storekeeper adds the material in the store.
After this process material is ready and can be issued to the clients and if not in use, material can be taken back from the clients.

Advantages
» Stock level with colour indication
» Multiple users based on their roles
» Remote access using Dialup & LAN
» Client Server Technology
» Report downloading in TXT, CSV & PDF format
» Track of consumption which helps in monitoring cost
» Stock level with colour indication

Central Management System (CMS)

CaptainPad™ CMS supports administrators to manage several database from a central location, and to provide restaurant managers with varied levels of access to the point of sale depending on their needs and role. CMS is centralized management system which has server at center place where all Restaurant branch data lives. It easily gives financial summary report of combined or individual branches at a defined central location.

How it works

The Central Management System will take care of most of the operation issues in managing the chain of restaurants. At day close event, MIS reports from CaptainPad™ POS will be automatically transferred to the central server (Sale reports). At the day open event, MIS reports from CaptainPad™ MMS will be automatically transferred to the central server after the actual stock balance is fed in (Stock reports).

Advantages
» Java based Client Server Technology.
» Multi user with role based authorization.
» Fully automatic data exchange and easy availability of outlet data.
» Precise operations. (i.e. reduced errors)
» Reduced labour costs.
» Precise MIS reports.
» Highest level of data and transactional security.
» No special internet requirements such as broadband or leased line.
» O.S. independent.
» Virus free operations when implemented on Linux.
